

Call For Participation

WiOpt'07

5th Intl. Symposium on Modeling and Optimization in Mobile, Ad Hoc, and Wireless Networks

April 16-20, 2007, Limassol, Cyprus

www.wiopt.org

Scope of the Symposium

The design of wireless networks offers challenges not present in fixed networks: both the offered traffic and the network capacity depend on the mobility of the nodes. The designs should not only be functioning correctly, they are also expected to optimize the performance with respect to many criteria, such as energy efficiency, quality of service, and capacity utilization. This symposium intends to bring together researchers and practitioners working on optimization of wireless network design and operations. It welcomes different perspectives, including performance analysis, protocol design, wireless communication, and optimization theory.

Conference Program: Visit the conference website www.wiopt.org for the conference program as well as travel information.

Keynote Speaker: Prof. R. Srikant, University of Illinois at Urbana-Champaign

Adjunct Workshops

Five one-day workshops will accompany the main WiOpt Symposium. Please check the conference website for more details

- ⇒ [WiNmee/WiTNeMo 2007](#) : International Workshop on Wireless Network Measurements
- ⇒ [RAWNET 2007](#) : Resource Allocation in Wireless Networks
- ⇒ [SPASWIN 2007](#) : Spatial Stochastic Models for Wireless Networks
- ⇒ [CONCOM 2007](#) : Control over Communication Channels
- ⇒ [WNC³ 2007](#) : Wireless Networks: Communication, Cooperation and Competition

Technical Sponsorship
